

Introducing the **NIGHTWATCHER** 720

The New NW 720 with built-in camera

- LED light source 1 x 11W AC LED Power Chip
- Robotic Head function – this function auto rotates the LED head towards any of the 3 motion sensor zones on detection, illuminating the activity
- Built-in colour camera - captures 20 second video files of triggered activations, all stored on a removable SD card
- Built-in speaker and microphone - for own or pre-recorded warning messages, activated when triggered
- Removable on-board SD card function - records and stores activation camera images or video files
- Intelligent PIR Motion Sensor - with 220° detection zone
- Built-in Photocell
- Day/Night mode selection option

Night Watcher NW 720 is a patented outdoor motion sensing fixture, with a robotic-rotating light head, including a built-in camera with on-board SD card storage function. When motion is detected in any of the three built-in motion sensor zones, the robotic light head will illuminate and turn towards the motion, whilst recording video files or images from triggered activations.
